This key should allow you to understand why you choose the option you did (beyond just getting a question right or wrong). More instructions on how to use this key can be found here.

If you have a suggestion to make the keys better, please fill out the short survey here.

Note: This key is auto-generated and may contain issues and/or errors. The keys are reviewed after each exam to ensure grading is done accurately. If there are issues (like duplicate options), they are noted in the offline gradebook. The keys are a work-in-progress to give students as many resources to improve as possible.

---

61. Choose the interval below that f composed with g at $x = -1$ is in.

$$f(x) = -4x^3 - 3x^2 + x \text{ and } g(x) = -2x^3 + 4x^2 + 3x - 3$$

The solution is 0.0

A. $(f \circ g)(-1) \in [-0.4, 1.3]$

   * This is the correct solution

B. $(f \circ g)(-1) \in [-9.6, -7.4]$

   Distractor 2: Corresponds to being slightly off from the solution.

C. $(f \circ g)(-1) \in [2.3, 9.1]$

   Distractor 3: Corresponds to being slightly off from the solution.

D. $(f \circ g)(-1) \in [-3.5, -2.7]$

   Distractor 1: Corresponds to reversing the composition.

E. It is not possible to compose the two functions.

General Comments: f composed with g at x means $f(g(x))$. The order matters!

---

62. Determine whether the function below is 1-1.

$$f(x) = \sqrt{6x - 36}$$

The solution is yes

A. No, because the domain of the function is not $(-\infty, \infty)$.

   Corresponds to believing 1-1 means the domain is all Real numbers.

B. No, because the range of the function is not $(-\infty, \infty)$.

   Corresponds to believing 1-1 means the range is all Real numbers.

C. No, because there is an x-value that goes to 2 different y-values.

   Corresponds to the Vertical Line test, which checks if an expression is a function.

D. No, because there is a y-value that goes to 2 different x-values.

   Corresponds to the Horizontal Line test, which this function passes.

E. Yes, the function is 1-1.

   * This is the solution.

General Comments: There are only two valid options: The function is 1-1 OR No because there is a y-value that goes to 2 different x-values.

---

63. Find the inverse of the function below. Then, evaluate the inverse at $x = 7$ and choose the interval that $f^{-1}(7)$ belongs to.

$$f(x) = \ln(x - 5) + 2$$

The solution is $f^{-1}(7) = 153.413$

A. $f^{-1}(7) \in [162755, 162760]$

This solution corresponds to distractor 2.

B. $f^{-1}(7) \in [142, 144]$

This solution corresponds to distractor 3.

C. $f^{-1}(7) \in [151, 160]$

This is the solution.

D. $f^{-1}(7) \in [8102, 8111]$

This solution corresponds to distractor 1.

E. $f^{-1}(7) \in [4, 14]$

This solution corresponds to distractor 4.

Natural log and exponential functions always have an inverse. Once you switch the x and y, use the conversion $e^y = x \leftrightarrow y = \ln(x)$.

---

64. Multiply the following functions, then choose the domain of the resulting function from the list below.

$$f(x) = \frac{4}{3x - 19} \text{ and } g(x) = \frac{1}{5x - 28}$$

The solution is The domain is all Real numbers except $x = 6.33333333333$ and $x = 5.6$

A. The domain is all Real numbers less than or equal to $x = a$, where $a \in [1, 8]$

B. The domain is all Real numbers except $x = a$, where $a \in [-9, -5]$

C. The domain is all Real numbers greater than or equal to $x = a$, where $a \in [5, 8]$

D. The domain is all Real numbers except $x = a$ and $x = b$, where $a \in [1, 8]$ and $b \in [5, 7]$

E. The domain is all Real numbers.

General Comments: The new domain is the intersection of the previous domains.

---

65. Find the inverse of the function below (if it exists). Then, evaluate the inverse at $x = 12$ and choose the interval the $f^{-1}(12)$ belongs to.

$$f(x) = \sqrt[3]{4x + 2}$$

The solution is 431.5

A. $f^{-1}(12) \in [432.46, 432.66]$

Distractor 1: This corresponds to

B. $f^{-1}(12) \in [-431.9, -431.36]$

This solution corresponds to distractor 2.

C. $f^{-1}(12) \in [-433.06, -432.36]$

This solution corresponds to distractor 3.

D. $f^{-1}(12) \in [431.35, 431.66]$

* This is the correct solution.

E. The function is not invertible for all Real numbers.

This solution corresponds to distractor 4.

General Comments: Be sure you check that the function is 1-1 before trying to find the inverse!
