

This key should allow you to understand why you choose the option you did (beyond just getting a question right or wrong). More instructions on how to use this key can be found [here](#).

If you have a suggestion to make the keys better, please fill out the short survey [here](#).

Note: This key is auto-generated and may contain issues and/or errors. The keys are reviewed after each exam to ensure grading is done accurately. If there are issues (like duplicate options), they are noted in the offline gradebook. The keys are a work-in-progress to give students as many resources to improve as possible.

1. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$-6 + 7x < \frac{61x + 8}{8} \leq -7 + 5x$$

The solution is $(-11.20, -3.05]$, which is option D.

- A. $(-\infty, a] \cup (b, \infty)$, where $a \in [-13.5, -6.75]$ and $b \in [-4.5, -2.25]$

$(-\infty, -11.20] \cup (-3.05, \infty)$, which corresponds to displaying the and-inequality as an or-inequality AND flipping the inequality.

- B. $(-\infty, a) \cup [b, \infty)$, where $a \in [-12.75, -9]$ and $b \in [-5.25, -0.75]$

$(-\infty, -11.20) \cup [-3.05, \infty)$, which corresponds to displaying the and-inequality as an or-inequality.

- C. $[a, b)$, where $a \in [-16.5, -9]$ and $b \in [-3.75, 2.25]$

$[-11.20, -3.05)$, which corresponds to flipping the inequality.

- D. $(a, b]$, where $a \in [-15.75, -7.5]$ and $b \in [-9.75, -1.5]$

* $(-11.20, -3.05]$, which is the correct option.

- E. None of the above.

General Comment: To solve, you will need to break up the compound inequality into two inequalities. Be sure to keep track of the inequality! It may be best to draw a number line and graph your solution.

2. Using an interval or intervals, describe all the x -values within or including a distance of the given values.

No more than 7 units from the number -4 .

The solution is $[-11, 3]$, which is option D.

- A. $(-\infty, -11] \cup [3, \infty)$

This describes the values no less than 7 from -4

- B. $(-\infty, -11) \cup (3, \infty)$

This describes the values more than 7 from -4

- C. $(-11, 3)$

This describes the values less than 7 from -4

- D. $[-11, 3]$

This describes the values no more than 7 from -4

- E. None of the above

You likely thought the values in the interval were not correct.

General Comment: When thinking about this language, it helps to draw a number line and try points.

3. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$\frac{-9}{9} - \frac{10}{8}x < \frac{6}{6}x + \frac{9}{5}$$

The solution is $(-1.244, \infty)$, which is option C.

- A. $(-\infty, a)$, where $a \in [-0.3, 2.17]$

$(-\infty, 1.244)$, which corresponds to switching the direction of the interval AND negating the endpoint. You likely did this if you did not flip the inequality when dividing by a negative as well as not moving values over to a side properly.

- B. (a, ∞) , where $a \in [0, 6]$

$(1.244, \infty)$, which corresponds to negating the endpoint of the solution.

- C. (a, ∞) , where $a \in [-2.25, -0.75]$

* $(-1.244, \infty)$, which is the correct option.

- D. $(-\infty, a)$, where $a \in [-1.65, -0.82]$

$(-\infty, -1.244)$, which corresponds to switching the direction of the interval. You likely did this if you did not flip the inequality when dividing by a negative!

- E. None of the above.

You may have chosen this if you thought the inequality did not match the ends of the intervals.

General Comment: Remember that less/greater than or equal to includes the endpoint, while less/greater do not. Also, remember that you need to flip the inequality when you multiply or divide by a negative.

4. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$3 - 5x < \frac{-17x - 3}{5} \leq 9 - 4x$$

The solution is $(2.25, 16.00]$, which is option D.

- A. $(-\infty, a) \cup [b, \infty)$, where $a \in [1.5, 6.75]$ and $b \in [12.75, 20.25]$

$(-\infty, 2.25) \cup [16.00, \infty)$, which corresponds to displaying the and-inequality as an or-inequality.

- B. $(-\infty, a] \cup (b, \infty)$, where $a \in [0.75, 9.75]$ and $b \in [11.25, 16.5]$

$(-\infty, 2.25] \cup (16.00, \infty)$, which corresponds to displaying the and-inequality as an or-inequality AND flipping the inequality.

- C. $[a, b)$, where $a \in [-1.5, 7.5]$ and $b \in [15, 20.25]$

$[2.25, 16.00)$, which corresponds to flipping the inequality.

- D. $(a, b]$, where $a \in [1.5, 9.75]$ and $b \in [13.5, 18]$

* $(2.25, 16.00]$, which is the correct option.

- E. None of the above.

General Comment: To solve, you will need to break up the compound inequality into two inequalities. Be sure to keep track of the inequality! It may be best to draw a number line and graph your solution.

5. Using an interval or intervals, describe all the x -values within or including a distance of the given values.

No more than 6 units from the number -3 .

The solution is $[-9, 3]$, which is option B.

- A. $(-\infty, -9] \cup [3, \infty)$

This describes the values no less than 6 from -3

- B. $[-9, 3]$

This describes the values no more than 6 from -3

- C. $(-9, 3)$

This describes the values less than 6 from -3

- D. $(-\infty, -9) \cup (3, \infty)$

This describes the values more than 6 from -3

- E. None of the above

You likely thought the values in the interval were not correct.

General Comment: When thinking about this language, it helps to draw a number line and try points.

6. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$-9 + 5x > 8x \text{ or } -6 + 4x < 7x$$

The solution is $(-\infty, -3.0)$ or $(-2.0, \infty)$, which is option D.

- A. $(-\infty, a] \cup [b, \infty)$, where $a \in [0, 3.75]$ and $b \in [1.5, 8.25]$

Corresponds to including the endpoints AND negating.

- B. $(-\infty, a) \cup (b, \infty)$, where $a \in [0.75, 2.25]$ and $b \in [0.75, 3.75]$

Corresponds to inverting the inequality and negating the solution.

- C. $(-\infty, a] \cup [b, \infty)$, where $a \in [-3.75, -2.25]$ and $b \in [-3.75, -0.75]$

Corresponds to including the endpoints (when they should be excluded).

- D. $(-\infty, a) \cup (b, \infty)$, where $a \in [-3.75, -1.5]$ and $b \in [-6, 0]$

* Correct option.

- E. $(-\infty, \infty)$

Corresponds to the variable canceling, which does not happen in this instance.

General Comment: When multiplying or dividing by a negative, flip the sign.

7. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$-5 + 5x > 7x \text{ or } -3 + 6x < 9x$$

The solution is $(-\infty, -2.5)$ or $(-1.0, \infty)$, which is option A.

- A. $(-\infty, a) \cup (b, \infty)$, where $a \in [-4.5, -0.75]$ and $b \in [-5.25, 1.5]$

* Correct option.

- B. $(-\infty, a] \cup [b, \infty)$, where $a \in [-8.25, 0.75]$ and $b \in [-2.17, -0.3]$

Corresponds to including the endpoints (when they should be excluded).

- C. $(-\infty, a) \cup (b, \infty)$, where $a \in [-2.25, 6]$ and $b \in [-0.75, 5.25]$

Corresponds to inverting the inequality and negating the solution.

- D. $(-\infty, a] \cup [b, \infty)$, where $a \in [-0.75, 5.25]$ and $b \in [2.17, 2.55]$

Corresponds to including the endpoints AND negating.

- E. $(-\infty, \infty)$

Corresponds to the variable canceling, which does not happen in this instance.

General Comment: When multiplying or dividing by a negative, flip the sign.

8. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$-7x - 8 > 5x + 5$$

The solution is $(-\infty, -1.083)$, which is option B.

- A. (a, ∞) , where $a \in [1.08, 8.08]$

$(1.083, \infty)$, which corresponds to switching the direction of the interval AND negating the endpoint. You likely did this if you did not flip the inequality when dividing by a negative as well as not moving values over to a side properly.

- B. $(-\infty, a)$, where $a \in [-2.08, -0.08]$

* $(-\infty, -1.083)$, which is the correct option.

- C. $(-\infty, a)$, where $a \in [0.08, 5.08]$

$(-\infty, 1.083)$, which corresponds to negating the endpoint of the solution.

- D. (a, ∞) , where $a \in [-7.08, 0.92]$

$(-1.083, \infty)$, which corresponds to switching the direction of the interval. You likely did this if you did not flip the inequality when dividing by a negative!

- E. None of the above.

You may have chosen this if you thought the inequality did not match the ends of the intervals.

General Comment: Remember that less/greater than or equal to includes the endpoint, while less/greater do not. Also, remember that you need to flip the inequality when you multiply or divide by a negative.

9. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$\frac{5}{3} + \frac{5}{8}x > \frac{10}{6}x - \frac{7}{2}$$

The solution is $(-\infty, 4.96)$, which is option D.

- A. (a, ∞) , where $a \in [-6.75, -1.5]$

$(-4.96, \infty)$, which corresponds to switching the direction of the interval AND negating the endpoint. You likely did this if you did not flip the inequality when dividing by a negative as well as not moving values over to a side properly.

- B. $(-\infty, a)$, where $a \in [-8.25, -3]$

$(-\infty, -4.96)$, which corresponds to negating the endpoint of the solution.

- C. (a, ∞) , where $a \in [2.25, 6.75]$

$(4.96, \infty)$, which corresponds to switching the direction of the interval. You likely did this if you did not flip the inequality when dividing by a negative!

- D. $(-\infty, a)$, where $a \in [3, 6.75]$

* $(-\infty, 4.96)$, which is the correct option.

- E. None of the above.

You may have chosen this if you thought the inequality did not match the ends of the intervals.

General Comment: Remember that less/greater than or equal to includes the endpoint, while less/greater do not. Also, remember that you need to flip the inequality when you multiply or divide by a negative.

10. Solve the linear inequality below. Then, choose the constant and interval combination that describes the solution set.

$$-8x - 8 \leq 10x - 9$$

The solution is $[0.056, \infty)$, which is option C.

- A. $(-\infty, a]$, where $a \in [-0.76, 0.04]$

$(-\infty, -0.056]$, which corresponds to switching the direction of the interval AND negating the endpoint. You likely did this if you did not flip the inequality when dividing by a negative as well as not moving values over to a side properly.

- B. $(-\infty, a]$, where $a \in [-0.02, 0.2]$

$(-\infty, 0.056]$, which corresponds to switching the direction of the interval. You likely did this if you did not flip the inequality when dividing by a negative!

- C. $[a, \infty)$, where $a \in [-0, 0.07]$

* $[0.056, \infty)$, which is the correct option.

- D. $[a, \infty)$, where $a \in [-0.17, 0.02]$

$[-0.056, \infty)$, which corresponds to negating the endpoint of the solution.

- E. None of the above.

You may have chosen this if you thought the inequality did not match the ends of the intervals.

General Comment: Remember that less/greater than or equal to includes the endpoint, while less/greater do not. Also, remember that you need to flip the inequality when you multiply or divide by a negative.
