

This key should allow you to understand why you choose the option you did (beyond just getting a question right or wrong). More instructions on how to use this key can be found [here](#).

If you have a suggestion to make the keys better, please fill out the short survey [here](#).

Note: This key is auto-generated and may contain issues and/or errors. The keys are reviewed after each exam to ensure grading is done accurately. If there are issues (like duplicate options), they are noted in the offline gradebook. The keys are a work-in-progress to give students as many resources to improve as possible.

1. To estimate the one-sided limit of the function below as x approaches 4 from the right, which of the following sets of numbers should you use?

$$\frac{\frac{4}{x} - 1}{x - 4}$$

The solution is $\{4.1000, 4.0100, 4.0010, 4.0001\}$, which is option D.

- A. $\{4.0000, 4.1000, 4.0100, 4.0010\}$

If we get $\frac{0}{0}$ or $\frac{\infty}{\infty}$, the value 4 doesn't help us estimate the limit.

- B. $\{3.9000, 3.9900, 4.0100, 4.1000\}$

These values would estimate the limit at the point and not a one-sided limit.

- C. $\{4.0000, 3.9000, 3.9900, 3.9990\}$

If we get $\frac{0}{0}$ or $\frac{\infty}{\infty}$, the value 4 doesn't help us estimate the limit.

- D. $\{4.1000, 4.0100, 4.0010, 4.0001\}$

This is correct!

- E. $\{3.9000, 3.9900, 3.9990, 3.9999\}$

These values would estimate the limit of 4 on the left.

General Comment: General Comments: To evaluate a one-sided limit, we want to put numbers close to the limit. We can't use the limit value itself if it results in $\frac{0}{0}$ or $\frac{\infty}{\infty}$

2. Based on the information below, which of the following statements is always true?

As

$x \text{ approaches } 4, f(x) \text{ approaches } 4.913.$

The solution is $f(x)$ is close to or exactly 4.913 when x is close to 4, which is option B.

- A. $f(x) = 4$ when x is close to 4.913

- B. $f(x)$ is close to or exactly 4.913 when x is close to 4

- C. $f(x) = 4.913$ when x is close to 4

- D. $f(x)$ is close to or exactly 4 when x is close to 4.913

- E. None of the above are always true.

General Comment: General comments: The limit tells you what happens as the x -values approach 4. It says **absolutely nothing** about what is happening exactly at $f(x)$!

3. Evaluate the limit below, if possible.

$$\lim_{x \rightarrow 9} \frac{\sqrt{4x - 20} - 4}{2x - 18}$$

The solution is None of the above, which is option E.

A. 1.000

You likely tried to use a shortcut to find the limit of a function that only works for when the numerator/denominator are polynomials.

B. 0.062

You likely learned L'Hospital's Rule in a previous course, but misapplied it here.

C. 0.125

You likely memorized how to solve the similar homework problem and used the same formula here.

D. ∞

You likely believed that since the denominator is equal to 0, the limit is infinity.

E. None of the above

* This is the correct option as the limit is 0.250.

General Comment: General comments: It is difficult to imagine the graph of this function, so you need to test values close to $x = 9$.

4. Evaluate the one-sided limit of the function $f(x)$ below, if possible.

$$\lim_{x \rightarrow 5^+} \frac{9}{(x + 5)^8} + 9$$

The solution is $f(5)$, which is option C.

A. ∞

B. $-\infty$

C. $f(5)$

D. The limit does not exist

E. None of the above

General Comment: General comments: You should be able to graph the rational function displayed. If not, go back to Module 7 to learn about the general shape of rational functions.

5. To estimate the one-sided limit of the function below as x approaches 5 from the right, which of the following sets of numbers should you use?

$$\frac{\frac{5}{x} - 1}{x - 5}$$

The solution is $\{5.1000, 5.0100, 5.0010, 5.0001\}$, which is option D.

A. $\{4.9000, 4.9900, 5.0100, 5.1000\}$

These values would estimate the limit at the point and not a one-sided limit.

B. $\{5.0000, 4.9000, 4.9900, 4.9990\}$

If we get $\frac{0}{0}$ or $\frac{\infty}{\infty}$, the value 5 doesn't help us estimate the limit.

C. $\{4.9000, 4.9900, 4.9990, 4.9999\}$

These values would estimate the limit of 5 on the left.

D. $\{5.1000, 5.0100, 5.0010, 5.0001\}$

This is correct!

E. $\{5.0000, 5.1000, 5.0100, 5.0010\}$

If we get $\frac{0}{0}$ or $\frac{\infty}{\infty}$, the value 5 doesn't help us estimate the limit.

General Comment: General Comments: To evaluate a one-sided limit, we want to put numbers close to the limit. We can't use the limit value itself if it results in $\frac{0}{0}$ or $\frac{\infty}{\infty}$

6. Evaluate the one-sided limit of the function $f(x)$ below, if possible.

$$\lim_{x \rightarrow 3^+} \frac{-4}{(x+3)^8} + 4$$

The solution is $f(3)$, which is option C.

A. $-\infty$

B. ∞

C. $f(3)$

D. The limit does not exist

E. None of the above

General Comment: General comments: You should be able to graph the rational function displayed. If not, go back to Module 7 to learn about the general shape of rational functions.

7. For the graph below, find the value(s) a that makes the statement true: $\lim_{x \rightarrow a} f(x)$ does not exist.

The solution is 1, which is option A.

A. 1

B. -2

C. 3

D. Multiple a make the statement true.

E. No a make the statement true.

General Comment: General Comments: Remember that the limit does not exist if the left-hand and right-hand limits do not match.

8. For the graph below, find the value(s) a that makes the statement true: $\lim_{x \rightarrow a} f(x)$ does not exist.

The solution is 1, which is option C.

- A. 3
- B. -2
- C. 1
- D. Multiple a make the statement true.
- E. No a make the statement true.

General Comment: General Comments: Remember that the limit does not exist if the left-hand and right-hand limits do not match.

9. Evaluate the limit below, if possible.

$$\lim_{x \rightarrow 8} \frac{\sqrt{3x-8}-4}{2x-16}$$

The solution is None of the above, which is option E.

- A. 0.125

You likely memorized how to solve the similar homework problem and used the same formula here.

- B. 0.866

You likely tried to use a shortcut to find the limit of a function that only works for when the numerator/denominator are polynomials.

- C. ∞

You likely believed that since the denominator is equal to 0, the limit is infinity.

- D. 0.062

You likely learned L'Hospital's Rule in a previous course, but misapplied it here.

E. None of the above

* This is the correct option as the limit is 0.188.

General Comment: General comments: It is difficult to imagine the graph of this function, so you need to test values close to $x = 8$.

10. Based on the information below, which of the following statements is always true?

$f(x)$ approaches 14.169 as x approaches ∞ .

The solution is None of the above are always true., which is option E.

- A. $f(x)$ is undefined when x is large enough.
- B. $f(x)$ is undefined when $f(x)$ is large enough.
- C. $f(x)$ is close to or exactly 14.169 when x is large enough.
- D. $f(x)$ is close to or exactly ∞ when x is large enough.
- E. None of the above are always true.

General Comment: General comments: The limit tells you what happens as the x -values approach ∞ . It says **absolutely nothing** about what is happening exactly at $f(x)$!
