1. Using the situation below, construct a linear model that describes the cost of the coffee beans $C(h)$ in terms of the weight of the low-quality coffee beans h.

   Veronica needs to prepare 90 of blended coffee beans selling for $5.63 per pound. She has a high-quality bean that sells for $6.81 a pound and a low-quality bean that sells for $3.85 a pound.

   A. $C(h) = -2.96h + 612.90$

   B. $C(h) = 2.96h + 346.50$

   C. $C(h) = 3.85h$

   D. $C(h) = 5.33h$

   E. None of the above.

---

2. A town has an initial population of 50000. The town's population for the next 9 years is provided below. Which type of function would be most appropriate to model the town's population?

Year	1	2	3	4	5	6	7	8	9
Pop	49977	49965	49937	49925	49897	49885	49857	49845	49817

   A. Linear

   B. Non-Linear Power

   C. Exponential

   D. Logarithmic

   E. None of the above

---

3. For the information provided below, construct a linear model that describes her total income, I, as a function of the number of months, x she is at UF.

   Aubrey is a college student going into her first year at UF. She will receive Bright Futures, which covers her tuition plus a $800 educational expense each year. Before college, Aubrey saved up $9000.

She knows she will need to pay $1200 in rent a month, $80 for food a week, and $64 in other weekly expenses.

A. $I(x) = 1344$

B. $I(x) = 1344x$

C. $I(x) = 1776x$

D. $I(x) = 1776$

E. None of the above.

---

4. A town has an initial population of 70000. The town's population for the next 9 years is provided below. Which type of function would be most appropriate to model the town's population?

Year	1	2	3	4	5	6	7	8	9
Pop	70000	69965	69945	69930	69919	69910	69902	69896	69890

A. Logarithmic

B. Exponential

C. Linear

D. Non-Linear Power

E. None of the above

---

5. What is the **best** way to describe the domain of the scenario below?

Chemists commonly create a solution by mixing two products of differing concentrations together. A 10% and 30% solution can make an acid solution of some value between these, such as a 24% acid solution. The chemist wants to make differing solution percentages of 7 liters each.

A. There is no restricted domain in this scenario

B. Proper subset of the Real numbers

C. Subset of the Integers

D. Subset of the Rational numbers

E. Subset of the Natural numbers

---

6. For the information provided below, construct a linear model that describes her total income, I, as a function of the number of months, x she is at UF.

   Aubrey is a college student going into her first year at UF. She will receive Bright Futures, which covers her tuition plus a $400 educational expense each year. Before college, Aubrey saved up $6000. She knows she will need to pay $1100 in rent a month, $70 for food a week, and $56 in other weekly expenses.

   A. $I(x) = 6400$

   B. $I(x) = 400x + 6000$

   C. $I(x) = 6000x + 400$

   D. $I(x) = 6400x$

   E. None of the above.

---

7. For the information provided below, construct a linear model that describes the total distance of the path, D, in terms of the time spent on a particular path *if we know that all parts of the path are equal length.*

   A bicyclist is training for a race on a hilly path. Their bike keeps track of their speed at any time, but not the distance traveled. Their speed traveling up a hill is 6 mph, 10 mph when traveling down a hill, and 8 mph when traveling along a flat portion.

   A. $24t$

   B. $0.392t$

   C. $480t$

   D. The model can be found with the information provided, but isn't options 1-3

   E. The model cannot be found with the information provided.

8. What is the **best** way to describe the domain of the scenario below?

   Hannah plans to pay off a no-interest loan from her parents. Her loan balance is $1,000. She plans to pay $35 at the end of every week until her balance is $0. How many weeks will it be until she has paid off her loan?

   A. There is no restricted domain in this scenario

   B. Subset of the Natural numbers

   C. Subset of the Rational numbers

   D. Proper subset of the Real numbers

   E. Subset of the Integers

9. For the information below, construct a linear model that describes the total time T spent on the path in terms of the distance of a particular part of the path *if we know that all parts of the path are equal length.*

   A bicyclist is training for a race on a hilly path. Their bike keeps track of their speed at any time, but not the distance traveled. Their speed traveling up a hill is 4 mph, 11 mph when traveling down a hill, and 7 mph when traveling along a flat portion.

   A. $0.484D$

   B. $308.000D$

   C. $22.000D$

   D. The model can be found with the information provided, but isn't options 1-3

   E. The model cannot be found with the information provided.

10. Using the situation below, construct a linear model that describes the cost of the coffee beans $C(h)$ in terms of the weight of the high-quality coffee beans h.

Veronica needs to prepare 200 of blended coffee beans selling for $3.66 per pound. She has a high-quality bean that sells for $4.31 a pound and a low-quality bean that sells for $2.32 a pound.

A. $C(h) = 4.31h$

B. $C(h) = 3.31h$

C. $C(h) = 1.99h + 464.00$

D. $C(h) = -1.99h + 862.00$

E. None of the above.
