1. For the information below, construct a linear model that describes the total time T spent on the path in terms of the distance of a particular part of the path *if we know that the time spent on each path was equal.*

   A bicyclist is training for a race on a hilly path. Their bike keeps track of their speed at any time, but not the distance traveled. Their speed traveling up a hill is 4 mph, 11 mph when traveling down a hill, and 7 mph when traveling along a flat portion.

   A. $22.000D$

   B. $0.484D$

   C. $308.000D$

   D. The model can be found with the information provided, but isn't options 1-3

   E. The model cannot be found with the information provided.

---

2. For the information provided below, construct a linear model that describes her total costs, C, as a function of the number of months, x she is at UF.

   Aubrey is a college student going into her first year at UF. She will receive Bright Futures, which covers her tuition plus a $600 educational expense each year. Before college, Aubrey saved up $11000. She knows she will need to pay $1100 in rent a month, $50 for food a week, and $64 in other weekly expenses.

   A. $C(x) = 1214x$

   B. $C(x) = 11600x$

   C. $C(x) = 1214$

   D. $C(x) = 11600$

   E. None of the above.

---

3. For the information provided below, construct a linear model that describes the total distance of the path, D, in terms of the time spent on a particular path *if we know that the time spent on each path was equal.*

A bicyclist is training for a race on a hilly path. Their bike keeps track of their speed at any time, but not the distance traveled. Their speed traveling up a hill is 3 mph, 7 mph when traveling down a hill, and 5 mph when traveling along a flat portion.

A. $0.676t$

B. $15t$

C. $105t$

D. The model can be found with the information provided, but isn't options 1-3

E. The model cannot be found with the information provided.

---

4. For the information provided below, construct a linear model that describes her total income, I, as a function of the number of months, x she is at UF.

    Aubrey is a college student going into her first year at UF. She will receive Bright Futures, which covers her tuition plus a $800 educational expense each year. Before college, Aubrey saved up $11000. She knows she will need to pay $1100 in rent a month, $70 for food a week, and $32 in other weekly expenses.

    A. $I(x) = 1202x$

    B. $I(x) = 1508x$

    C. $I(x) = 1508$

    D. $I(x) = 1202$

    E. None of the above.

---

5. What is the **best** way to describe the domain of the scenario below?

    The rate at which a cricket chirps is a linear function of temperature. At 59 degrees F they make 76 chirps per minute and at 65 degrees F they make 100 chirps per minute.

    A. Subset of the Rational numbers

B. Proper subset of the Real numbers

C. Subset of the Natural numbers

D. Subset of the Integers

E. There is no restricted domain in this scenario

---

6. A town has an initial population of 60000. The town's population for the next 9 years is provided below. Which type of function would be most appropriate to model the town's population?

Year	1	2	3	4	5	6	7	8	9
Pop	60000	59979	59967	59958	59951	59946	59941	59937	59934

A. Non-Linear Power

B. Exponential

C. Linear

D. Logarithmic

E. None of the above

---

7. Using the situation below, construct a linear model that describes the cost of the coffee beans $C(h)$ in terms of the weight of the low-quality coffee beans h.

Veronica needs to prepare 220 of blended coffee beans selling for $6.24 per pound. She has a high-quality bean that sells for $6.77 a pound and a low-quality bean that sells for $4.75 a pound.

A. $C(h) = 2.02h + 1045.00$

B. $C(h) = -2.02h + 1489.40$

C. $C(h) = 5.76h$

D. $C(h) = 4.75h$

E. None of the above.

---

8. A town has an initial population of 50000. The town's population for the next 9 years is provided below. Which type of function would be most appropriate to model the town's population?

Year	1	2	3	4	5	6	7	8	9
Pop	49960	49920	49880	49840	49800	49760	49720	49680	49640

   A. Linear

   B. Non-Linear Power

   C. Logarithmic

   D. Exponential

   E. None of the above

9. What is the **best** way to describe the domain of the scenario below?

Veronica needs to prepare 170 lbs of blended coffee beans to sell for $4.71 per pound. She has a high-quality bean that sells for $6.00 a pound and a low-quality been that sells for $3.25 a pound.

   A. Subset of the Natural numbers

   B. Proper subset of the Real numbers

   C. There is no restricted domain in this scenario

   D. Subset of the Rational numbers

   E. Subset of the Integers

10. Using the situation below, construct a linear model that describes the cost of the coffee beans $C(h)$ in terms of the weight of the low-quality coffee beans h.

Veronica needs to prepare 180 of blended coffee beans selling for $6.01 per pound. She has a high-quality bean that sells for $7.07 a pound and a low-quality bean that sells for $4.80 a pound.

   A. $C(h) = -2.27h + 1272.60$

   B. $C(h) = 5.94h$

C. $C(h) = 2.27h + 864.00$

D. $C(h) = 4.80h$

E. None of the above.
